

## VEKAdeck FASTENING OPTIONS

White

Gray

Almond

Mocha

Khaki

Walnut

Cayenne

Hazelnut

Espresso

Storm

For optimal performance, VEKA recommends using two #8 x 2 1/2" Stainless Steel Screws per joist for VEKAdeck boards. Please consider the below fastening systems listed for usage with VEKAdeck boards.

VEKA recognizes that numerous hidden fastening systems are available industry wide that may be compatible with VEKAdeck boards. VEKA recommends the installer reviews the fasteners manufacturer installation instructions, technical data, and fastener strength before installation with your VEKAdeck product. The installer is also responsible to assess the selected fasteners capabilities relative to uplift, screw pull through, expansion/contraction, and thermal movement of VEKAdeck boards.

\*VEKA has not assessed the performance of these fasteners below when installed with VEKAdeck boards.

^Product is not recommended for cold weather installation due to potential impact issues.
